

Student nurses at Royal Oak, Troy, Grosse Pointe, and Farmington Hills will now select their default cosigner after selecting department during log-in. Prior to this change they would have to select a cosigner everytime they documented on a patient in either the flowsheet or the MAR.

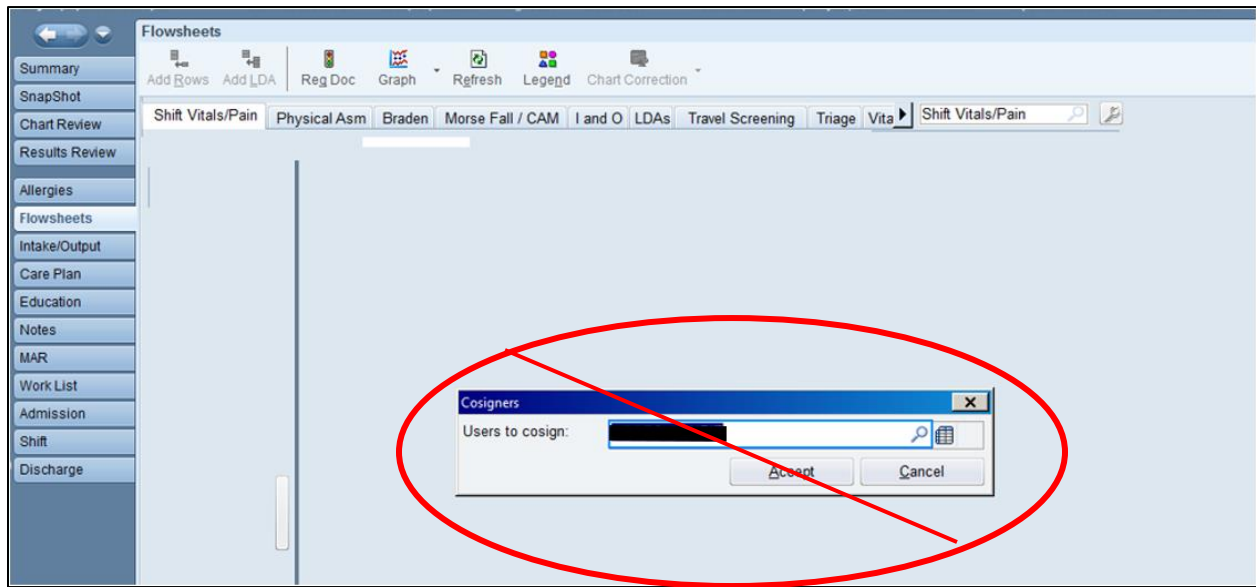

1. At the log in screen, identify the cosigner

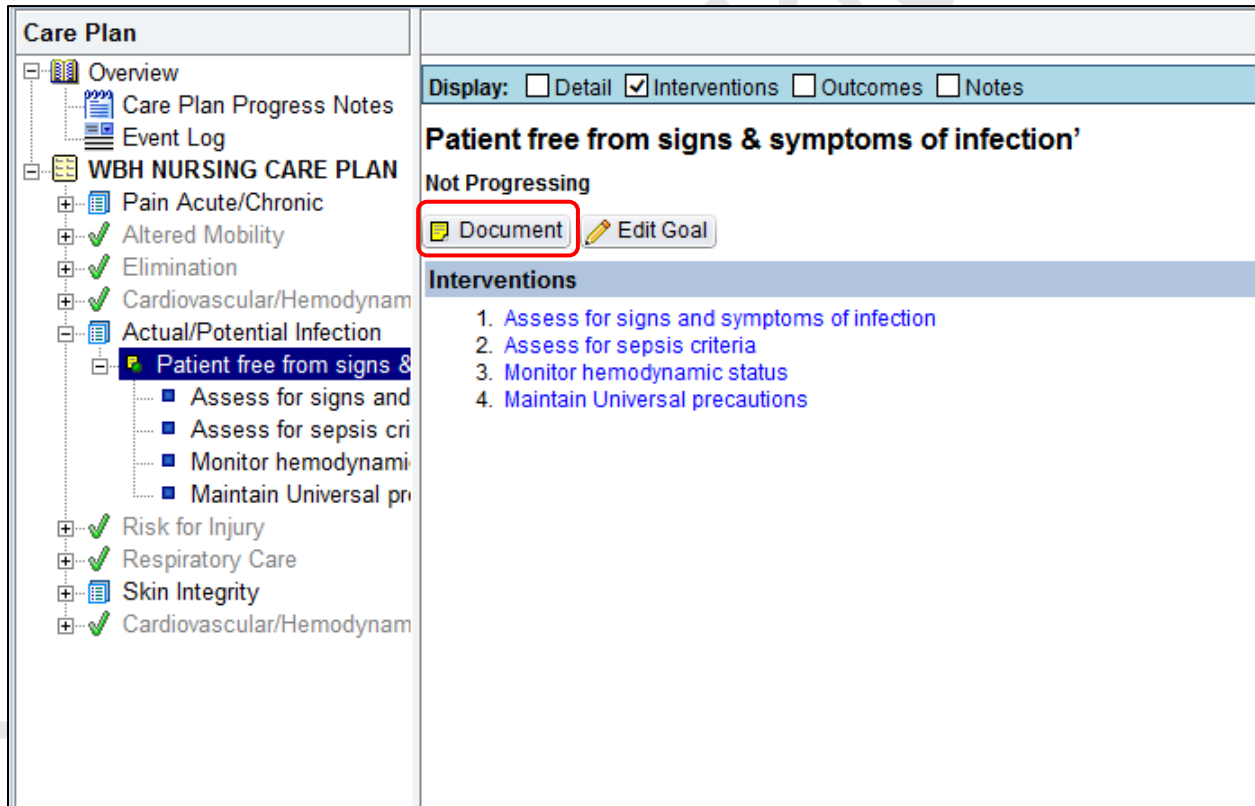

Student nurses are now able to document in the mini flowsheet section without selecting a cosigner during medication administration. Student nurses will still require dual sign-off on medication administration.

Student nurses will no longer be required to select a cosigner when clicking on the Flowsheet activity. The following is a screen shot of how it used to present for student nurses.

Student nurses are now able to document on goals and interventions within the Care Plan activity.

Documentation in the Care Plan activity is stored in a Care Plan Note that will require co-signature from a nurse. Notes written by nursing students required co-signature prior to this enhancement.
